

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): Method for creating a Graphical User Interface (GUI), starting from a protocol dependent Management Information Base (MIB) browser and an Element Manager-Network Manager (EM-NM) interface model, comprising the following steps:

at an Element Manager Level (EML), acting as an HTTP server, making a syntactical conversion from a specific protocol dependent MIB model language into a generic eXtensible Markup Language (XML) model ;

retrieving said syntactical conversion from the GUI through a WEB browser, wherein said WEB browser acts as an HTTP client; and

when retrieved, parsing said syntactical conversion by using a specific XML Scheme, and

wherein said WEB browser is a generic manager application which downloads, from said

HTTP server, the XML Scheme to be used to decode the syntactical conversions~~specific application MIB description~~.

2. (previously presented): Method according to claim 1, wherein said WEB browser further comprises:

displaying a MIB representation provided by an agent application thereby implementing an HTTP server side of a network device or of a manager communication channel; and

reporting events which are sent from said HTTP server using the XML-based protocol

method.

3. (previously presented): A telecommunication system comprising:
a device adapted to act as an HTTP server; and
a WEB browser adapted to act as an HTTP client;
wherein the device is further adapted to perform a syntactical conversion from a specific protocol dependent MIB language model to a generic XML model; and
in that the WEB browser is further adapted to retrieve the syntactical conversion and to parse the retrieved syntactical conversion using a specific extensible markup language Scheme downloaded from the HTTP server.

4. (canceled).

5. (original): Computer program comprising computer program code means adapted to perform all the steps of claim 1, when said program is run on a computer.

6. (original): Computer program comprising computer program code means adapted to perform all the steps of claim 2, when said program is run on a computer.

7. (original): A computer readable medium having a program recorded thereon, said computer readable medium comprising computer program code means adapted to perform all the steps of claim 1, when said program is run on a computer.

8. (original): A computer readable medium having a program recorded thereon, said computer readable medium comprising computer program code means adapted to perform all the steps of claim 2, when said program is run on a computer.

9. (previously presented): The method according to claim 1, wherein the EML acts

as the HTTP server by preparing the MIB model language to the generic XML model permitting upload at the GUI.

10. (previously presented): The method according to claim 1, wherein said GUI comprises a Zero Installation Client (ZIC) web-oriented customizable GUI.
